

# ALAN LIU WU

Livingston, NJ | +1 862-485-9127 | [alanlwu@seas.upenn.edu](mailto:alanlwu@seas.upenn.edu) | [linkedin.com/in/alanlwu](https://www.linkedin.com/in/alanlwu) | [github.com/alan-w25](https://github.com/alan-w25) | [alan-wu.me](https://alan-wu.me)

## EDUCATION

### University of Pennsylvania

*Master of Science in Engineering in Data Science*

Philadelphia, PA

*Expected May 2026*

### Rutgers University- New Brunswick

*Bachelor's of Science in Computer Science and Data Science, minor in Statistics*

Activities: HackRU (Team Lead), Rutgers Men's Ultimate Frisbee (President)

New Brunswick, NJ

*Sep. 2021 – May 2024*

## TECHNICAL SKILLS

**Languages:** Python, SQL, R, Java, JavaScript, HTML, CSS

**Libraries/Frameworks:** Numpy, Pandas, Pytorch, Matplotlib, Seaborn, Sci-kit Learn, Tableau

**Certifications:** Machine Learning Specialization (DeepLearning.ai), IBM Data Science Professional Certificate

## EXPERIENCE

### Graduate Research Assistant

*Wharton School of Business*

July 2024 – Present

*Philadelphia, PA*

- Scraped and inserted over 12 million records of google review data into PostgreSQL database
- Employed **OpenAI API** on 500 samples to benchmark GPT-4o on unifying and multi-modal representation learning tasks including modality fusion and visual question answering
- Developed sentiment analysis and visualization techniques to extract multi-modal relationship insights from 3.5 million restaurant reviews with python

### Undergraduate Research Assistant

*Rutgers Cancer Institute of New Jersey*

Aug 2023 – May 2024

*New Brunswick, NJ*

- Scraped data from the Human Microbiome Project using **beautiful soup** and used principal components analysis and non-negative matrix factorization to reduce 2,000 microbes across 18 distinct body sites
- Utilized **Python, matplotlib, seaborn** to build heat maps, cluster diagrams, and survival curves to measure feature statistical significance. Hypothesis tested features with log-rank tests and Kaplan-Meier curves
- Analyzed viability of new DNA sequencing technique for lung cancer prognosis to model patient survival times and outcomes with survival support vector machines (ssvm), and random survival forests on 108 cancer patients
- Tuned L2 strength, learning rate, and kernel of ssvm model with stratified k-fold cv, yielding 0.83 C-Index

### Software Engineer Co-Op

*ASICS Digital*

Jul 2023 – Dec 2023

*Boston, MA*

- Automated previously manual process to verify metadata overlap with **Python** scripts to inform key design decisions during migration to a new Customer Data Platform. Verified over 2 million records
- Authored and optimized **SQL** queries, assisting in GDPR-user compliant deletion for over 1.7 million customers
- Utilized **Postman API** to A/B test time thresholds for email delivery in a global marketing campaign

## PROJECTS

### Kitchen Pantry Manager | *Next.js, MaterialUI, Firebase*

Aug 2024

- Developed a kitchen pantry inventory manager that adds, deletes, and updates pantry items and categories
- Implemented email and google authentication, shipping product to 100 users

### Chinese MNIST Digit Detection App | *Next.js, Fastapi, Pytorch, Docker, Azure*

May 2024 – June 2024

- Deployed full stack web application to accomplish classification of Chinese hand-written digits
- Built custom CNN architecture that achieved validation accuracy of 0.92
- Containerized app with **docker** compose and used **Azure** web services and container instances for deployment

### Online Retail Analysis | *Python, Pandas, Numpy, Matplotlib, Sci-kit Learn*

Nov 2023 – Dec 2023

- Conducted data pre-processing on UCI online retail dataset to ensure quality and consistency, implementing RFM (Recency, Frequency, Monetary) analysis to segment 4,000 customers based on purchase behavior
- Developed a Random Forest predictive model, fine-tuned with hyperparameter optimization, achieving a 0.76 R-squared value. This robust model was trained on a dataset with 100,000+ transactions

### Clinical Heart Failure Bayesian Analysis | *R, RMarkdown, rstanarm, ggplot2*

Nov 2023 – Dec 2023

- Executed bayesian logistic regression techniques, implementing an MCMC simulation-based model to predict patient survival from a dataset of 299 heart failure cases
- Achieved 0.87 accuracy using Bayesian logistic regression model, incorporating prior knowledge
- Applied posterior prediction and prior prediction checks to ensure validity of statistical assumptions

## INTERESTS

**Hobbies:** Cooking, Ultimate Frisbee, Reading, Golf, Learning New Languages, Running
